EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Joseph F. Oriti Registration No. 47,835 on May 6, 2010.

The application has been amended as follows:

Claim **31** has been amended as follows:

31. (Currently Amended) A method of establishing trust between two computer entities, the method comprising:

the first computer entity seeking a granting of trust from the server by sending an inquiry in the form of a can-attest message to the server, the can-attest message stating that the first computer entity can send an attestation message but that the first computer entity would like to know from the server whether such an attestation message is required, and if so any requirements that such server has with regard to such attestation message;

the server sending an attestation-wanted message to the first computer entity in response to the can-attest message, the attestation-wanted message stating that the server does in fact require an attestation message from the first computer entity and

Art Unit: 2436

that the attestation message as sent by the first computer entity must adhere to certain requirements as defined in such attestation-wanted message;

transmitting an attestation message from a first computer entity to a second computer entity, the attestation message including a code identifier (code ID) associated with the first computer entity that is calculated by using a security ID associated with the first computer entity and corresponding to a behavior parameter that is associated with a computing operation having security implications;

ensuring that the security ID corresponding to the behavior parameter has not been tampered with, by verifying the validity of the code ID in the second computer entity, the verifying comprising determining that the first computer entity is not included in a do-not-trust list; ~~and~~

transmitting a trust message from the second computer entity to the first computer entity upon successfully verifying the validity of the code ID, the trust message including a first secret that is shared between the first and the second computer entities for communicating securely over a first period of time, wherein the first period of time is determined by the second computer entity, and

the security ID including security information relating to the first computer entity, the security information being expressed as a number of name-value security attribute parameters, the first computer entity being an executable and referring to the parameters in the security information in the security ID to determine whether particular security behavior is allowed, the code identifier (code ID) being representative of the first computer entity and calculated as a one-way hash of a combination of the

Art Unit: 2436

executable of the first computer entity and the security ID so that modification of the security information in the security ID causes the calculated code ID to change and the second computer entity can interpret the change as an indication that the first computer entity should not be trusted.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance.

Claims **30, 31** are allowed based on the following:

The prior art of record, considered individually or in combination, fails to fairly show or suggest: *the first computer entity seeking a granting of trust from the server by sending an inquiry in the form of a can-attest message to the server, the can-attest message stating that the first computer entity can send an attestation message but that the first computer entity would like to know from the server whether such an attestation message is required, and if so any requirements that such server has with regard to such attestation message; and the server sending an attestation-wanted message to the first computer entity in response to the can-attest message, the attestation-wanted message stating that the server does in fact require an attestation message from the first computer entity and that the attestation message as sent by the first computer entity must adhere to certain requirements as defined in such attestation-wanted message, in addition to the other limitations in a manner as recited in claims 2 -4, 7 - 12, 14, 16, 18 - 21, 23, 25 - 33, 36 - 38.*

Claims 19 - 21, 23, 25 - 29, 37, 38 are allowed due to allowed base claim 30.

Claims 2 - 4, 7 - 12, 14, 16, 18, 32, 33, 36 are allowed due to allowed base claim 31.

So as indicated by the above statements, Applicant's arguments have been considered persuasive, in light of the set of claims with limitations as well as the enabling portions of the specification. The dependent claims further limit the independent claims and are considered allowable on the same basis as the independent claims as well as for the further limitations set forth.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
